

seed of said hybrid maize plant 34G13 having been deposited under ATCC accession number _____, wherein the tissue regenerates plants expressing all the morphological and physiological characteristics of said hybrid maize plant 34G13.

6. (Amended)

A tissue culture according to claim 5, wherein cells or protoplasts are derived from a tissue selected from the group consisting of leaves, pollen, embryos, roots, root tips, anthers, silks, flowers, kernels, ears, cobs, husks, and stalks.

7. (Amended)

A maize plant, or its parts, regenerated from the tissue culture of claim 5 and expressing all the morphological and physiological characteristics of hybrid maize plant 34G13, representative seed having been deposited under ATCC accession number _____.

8. (Amended)

The maize plant of claim 2 wherein said plant has been manipulated to be male sterile.

9. (Amended)

A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 2; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

10. (Amended)

The method of claim 9 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and

transformation.

11. (Amended)

Sub B6
A² control

A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 2, said maize plant capable of expressing a combination of at least two traits which are not significantly different from 34G13 when determined at a 5% significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.

13. (Amended)

A²

A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 12; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

14. (Amended)

The method of claim 13 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

15. (Amended)

A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 12, said maize plant capable of expressing a combination of at least two traits which are not significantly different from 34G13 when determined at a 5% significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.

Sub B8 >

17. (Amended)

A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 16; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

A³

18. (Amended)

The method of claim 17 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

19. (Amended)

A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 16, said maize plant capable of expressing a combination of at least two traits which are not significantly different from 34G13 when determined at a 5%

significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.

21. (Amended)

The maize plant of claim 20 wherein said maize plant has been manipulated to be male sterile.

22. (Amended)

A⁴
A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 20; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

23. (Amended)

The method of claim 22 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

24. (Amended)

significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.

26. (Amended)

A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 25; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

A5

27. (Amended)

The method of claim 26 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

28. (Amended)

Sub B13

A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 25, said maize plant capable of expressing a combination of at least two traits which are not significantly different from 34G13 when determined at a 5% significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional

drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.

30. (Amended)

A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 29; and employing said plant or its parts as a source of said breeding material, in a maize plant breeding program.

31. (Amended)

The method of claim 30 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

32. (Amended)

A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 29, said maize plant capable of expressing a combination of at least two traits which are not significantly different from 34G13 when determined at a 5% significance level and when grown in the same environmental conditions, said traits selected from the group consisting of: a relative maturity of approximately 108 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, outstanding grain yield, excellent stalk strength, very good root strength, excellent stay green, exceptional drought tolerance, very good Anthracnose stalk rot resistance, very good Fusarium ear rot resistance, very good Gibberella ear rot resistance, and suited to the Northwest, Northcentral, Northeast, Drylands and Central Corn Belt regions of the United States and to Canada.
